CLO #	CLO Statement	Taxonomy Level	PLO
2	Implement various data structures and apply them in simple applications.	C2	4

Question # 1: A doubly linked list is maintained using only a head pointer. Write a function **moveHead** that takes an integer position as input and moves the head pointer of the doubly linked list to the node at the specified position.

All nodes before that position must be shifted to the end of the list while maintaining their original order. The first node of the list is at position 0.

Sample Output:

Original List: 10 < - > 20 < - > 30 < - > 40 < - > 50

Position = 2

Updated List: 30 < - > 40 < - > 50 < - > 10 < - > 20

Question # 2: Create a recursive program to remove duplicate numbers from array while maintaining the original order.
