FACULTY OF INFORMATION TECHNOLOGY

Introduction to Database System (Lab) Graded Lab 5

Instructions

1. Execute queries in sequence.
2. Use ALTER where required.
3. Submit **SQL file and screenshots**.

Question 01

Write a query that displays every office city along with the total number of employees working in that office in descending order.

Question 02

Write a query that displays each customer's name along with:

- Total payments made
 - Minimum payment amount
 - Maximum payment amount
 - Average payment amount
-

Question 03

Write a query using the **EXISTS** operator to display the names of all customers who have placed at least one order.

Question 04

Write a query using the **ANY** operator to display the names of products whose MSRP is greater than at least one product in the "Classic Cars" product line.

Question 05

Display the customer number and customer name of the customer having the highest credit limit.

Question 06

Write a correlated subquery to display the product code and product name of products whose MSRP is greater than the average MSRP of their own product line.

Question 07

Write a correlated subquery to display:

- Order Number
- Customer Number
- Total Order Value

in descending order of total order value.

Hint: Total Order Value = quantityOrdered × priceEach

Question 08

Write a query to display the employee number, first name, last name, and manager number of those employees who supervise at least one employee.

Question 09

Write a correlated subquery to display complete information of the customer(s) who made the largest payment.

Question 10

Write a query using the **ALL** operator to display products whose MSRP is greater than all products belonging to the "Motorcycles" product line.
